

panadice remanufacture

Remanufactured Panadice

Panadice are Panasonic external axis positioners that rotate your part, usually as the robot welds. Does your Panadice already heavily vibrate while moving or show play when you push on the drive?

If so, the damage is done and replacement will be the only option. We keep remanufactured dice on the shelf for when you need them.

200KG YA-1GJB11 Panadice
